

Achieving results in biospecimen collection for clinical research.

We conduct biospecimen collection within our community-based research network. Our embedded team works with physician groups to bring clinical research programs to patient populations that are historically not included in research.

COVID-19 Case Study: Project Peacock

We enrolled patients to provide saliva samples to validate a diagnostic test. The project was started, conducted, and approved by the FDA.

A Community Research Network built for biospecimen collection

Circuit Clinical is one of the nation's largest Integrated Research Organizations (IRO) with a rapidly growing and experienced Community Research Network across the US.

Efficiently enroll participants

Accelerate recruitment

Offer one point of contact

Increase racial diversity

Provide better ROI to sponsors

Let's talk about the future of biospecimen collection.

We provide collection, processing, storage, and shipment of biospecimens for clinical research through a national site network.
